Wood Grain Photo-Etched Mask

Your Airbrush

Attention: You need to mask the part before using this item, and let dry the previous light wooden color coat. Check the following process for further details.

Item Characteristics

- ① This item reproduces detailed wood grain with photo-etching.
- ② When painting, you can use this item just by pressing it on the part with your hands.
- ③ After painting, you can remove cleanly the paint from the sheet in order to use it again and again.

Process

Practice with some unnecessary parts, before you actually paint.

Sample Model: SWS 1/48 Horten Ho 229

Mask the area (painting every mold of the panel will give a more realistic effect) around the surface where you want to use the wooden painting, then base coat with a wooden-light color and let it dry.

After the base coat has dried, press the Wood Grain Photo-Etched Mask on the part making sure it doesn't move, and then use your airbrush just once to paint with a darker wooden-color and recreate the grain pattern.

Once you are sure the darker color has completely dried out, remove the masking gently and the work is done. Change the pattern or the masking position on each panel and paint.

Application

● Aircrafts' wooden outer panels

● Ship models' wooden parts

● AFV wooden parts
