

Attention!

This item is meant for hobbyists 15 years of age or older. Please do not give this item to children under 15. This item is intended for use with the Zoukei-mura 1/32 "A-1H Skyraider". The polyethylene bags that contain the parts and assembly manual present a suffocation risk. Please do not drop the parts or bend them in unintended ways, as they may be damaged. In order to properly express the shape of the sculpts, it was unavoidable for some parts to have sharp edges. Please be careful.

¥1,200 (Including Tax) ¥1,260

How to Install the Weighted Tires onto the 1/32 US Navy "A-1H" Skyraider. These parts are installed while assembling the 1/32 "A-1H". Please check the assembly manual of the 1/32 "A-1H" as well.

How to Install the Rear Tire

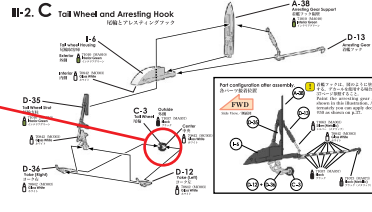

Please substitute the weighted rear tire for C-3 as shown in the illustration below while assembling the 1/32 "A-1H".

Install the weighted rear tire instead of C-3.

Make sure that the area of the tire that is flattened by the weight of the plane meets the ground. Refer to "Important Points for Installation" below.

Refer to the A-1H's manual p10.

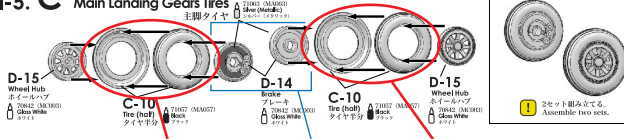

How to Install the Main Tires

Please substitute the weighted main tire parts for C-10 as shown in the illustration below.

Refer to the A-1H's manual p24.

III-5. C Main Landing Gears Tires

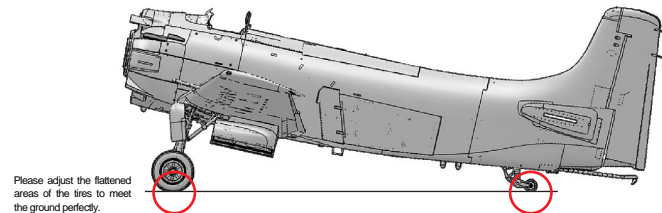

Install the weighted rear tire instead of C-10.

Regarding the main tires, it doesn't matter which part goes on the right or left. However, the areas where the tires are flattened by the weight of the plane need to be at the bottom (touching the ground). Right or left will be determined by how you attach D-14.

Be careful about the direction of D-14. The flattened areas of the weighted tires need to meet with the ground when you attach this part. It may be better not to glue it at this point. You can attach only D-14 to the strut (refer to the A-1H manual p.25) and then adjust the tires' flattened areas during assembly.

Please check the 1/32 A-1H's manual p.24 and 25 regarding attaching them to the aircraft.

Important Point for Installation

Please adjust the flattened areas of the tires to meet the ground perfectly.

Using the "Metal Struts" together with this item will add an even more realistic look to your work (sold separately).

Important Points for Assembly

Please carefully read the assembly manual prior to opening and make sure that everything is included.

To use this item, tools such as nippers, craft knife, files, sanding papers, instant glue, etc. are required, so please prepare them.

Please prepare the parts first. You can remove seam lines and gate marks with tools such as nippers, a craft knife and files. Urethane resin is softer than the plastic material used for the kit. So be careful to avoid carving too much. Air bubbles can be filled with putty (epoxy, plastic, etc.) or similar, then finish with sanding paper. In the case that mold details are lost, you can recover them with tools such as spatulas.

For assembly, adjust the direction of each part while checking the balance and pose of your entire kit.

Instant glue should be used for these parts. Please note that they cannot be glued with plastic model kit cement.

Base preparation is required before painting. Please thoroughly finish the base with a coat of surfacer spray (otherwise, the paint will chip off as time passes.)

With regard to paint, after taking personal safety and the global environment into consideration, we recommend using "Vallejo Colors," acrylic hobby paints for the new century. Please check reference manuals regarding the US Navy at that point and the assembly manual of the 1/32 A-1H Skyraider, and finish your Skyraider in your preferred color scheme.

When it comes time to use tools and paints, please carefully follow the individual instructions respective to each tool for your safety.
